

The first of Thermionic's all valve Celebration products . . .

The 20th Anniversary Limited Edition

CULTURE VULTURE

The first of several new products this year is a special limited edition of the best selling Culture Vulture. Limited to only 120, this unique purple colour unit, comes with Mullard and Philips factory valves and a signed certificate.

It differs from the original in that it has much lower background noise, using Sowter transformers to balance line inputs and outputs, also indented pots for easy recall. The sound is practically identical to the original, except the top end is extended to way beyond audio range, making it a great mastering tool. Of course you can still get 99% distortion if you should feel the need! There's even an extra extreme distortion position on the function switch.

EXTRA FEATURES

- Balanced line ins and outs on gold plated jacks
- All Mullard / Philips factory valves
- indented gain pots for easy recall
- +10dB position on Drive switch
- -10dB switch on output level control
- Function P2 for over-compression effects (P3=old P2)
- Extended frequency response for full mastering quality
- Up to 10dB lower background noise
